

What makes TerraMax soybean inoculants different?

TerraMax™
liquid™

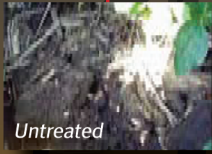

Untreated

Treated

- Two year shelf life
- Dry product is not peat based
- TerraMax Inoculants contains the growth stimulator Azospirillum
- Proprietary formulation provides greater stability:
 - Improved performance
 - Greater Survival
 - Longer life

TerraMax™
dry™

Untreated

Treated

- TerraMax Soybean Inoculants contain
- 2 strains Azospirillum
- 2 strains Bradyrhizobium

TerraMax Why soybean inoculants?

- Unique Bacteria Formulation
- Stability focused packaging
- Selling Inoculants since 1999
- Two Strains of Bradyrhizobium
- TerraMax Inoculants contain the growth stimulator Azospirillum

TerraMax liquid™ Benefits

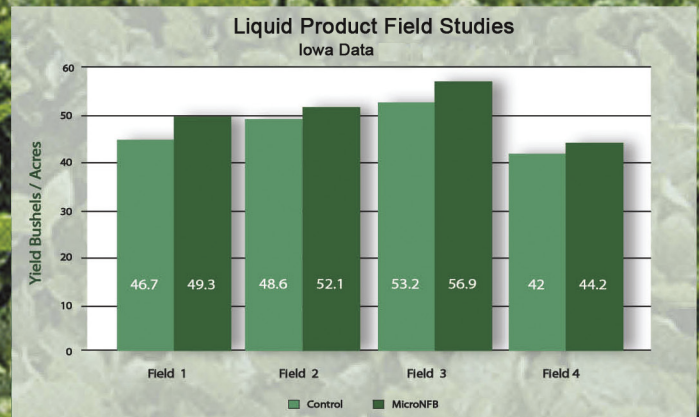

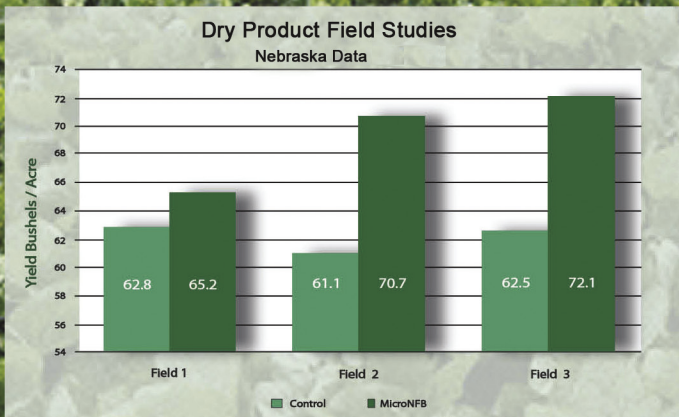

- Encourages the establishment of nodules
- Superior adherence to seed without additives
- Nutritional advantage for the germinating seed

Directions for Use:

Treatment 2.1 fluid oz. per 50 lbs. of seed
Package size treat 50 or 150 units of seed

Shake well before using
Store in a cool place

- Stabilized for survival
 - May increase yield
- Contains two strains each of Bradyrhizobium japonicum and the growth stimulator Azospirillum

“All TerraMax inoculants contain the root stimulant Azospirillum, this delivers improved stand establishment, greater resistance to stress and increased root mass. Azospirillum is known to provide additional nitrogen availability for plants, this coupled with bradyrhizobium technology may improve yield and profit for growers.”

TerraMax dry™ Benefits

- Fixes nitrogen
- Stabilized for superior survival
- Encourages the establishment of nodules

- 30 Day “on seed” stability, no need for extenders
- May increase yield Nutritional advantage for the germinating seed

Contains two strains Total Bradyrhizobium Japonicum 2×10^9

Directions for Use:

- Store in a cool place
- Treatment at 2 oz. per 50 lbs. of seed.
- Packages size treat 10 or 40 units of seed

Formulations

Liquid - 2.125 oz per unit (50#)

- 50 unit
- 150 unit

Dry - 2 oz per unit

- 10 unit
- 40 unit

Extended Life

- 30 days prior to planting
- Minimizes weather delay
- No degradation to performance over time
- Greater treatment flexibility
